

Canteen Management System (CMS) Paperless Canteen Services Management Solution

Processes that involve provisioning services to a large number of people come with a wide range of challenges and if not taken into consideration can lead to major losses. Food catering to a substantial number of people is not any different.

Companies that require to camp to a remote place such as Mining, Factories, Army base, Manufacturing plants to mention a few opt to provide food catering services to their workers within the compound. However, the decision normally come out of offering the best working conditions to their workers, but 90% of the times if not managed well, it can lead to unexpected losses.

The conventional process of managing food service provision to a large number of people has proven to be very tedious, due to a large amount of paperwork. Such processes use paper vouchers or via signing a log book which have proven hard to undertake decisions, planning, forecast, monitoring and evaluation of the overall process chain.

Processes that involve provisioning services to a large number of people come with a wide range of challenges and if not taken into consideration can lead to major losses.

Due to such a scenario, DataVision International designed Canteen Management System which can assist in managing the whole catering process integrated with POS devices which use cards hence rendering the process paperless.

Many organizations are faced with the difficulty of projecting the trend which can help in minimizing production cost and enabling to project the process throughput time. However with Canteen Management System (CMS), the dining facility operations can be made simple, with an easy-to-use interface that provides useful reports on a daily basis. CMS helps companies to serve a large number of users/ employees in a short period of time, increasing the performance by a substantial margin.

With Canteen Management System, companies can attain the following:

Paperless rendered business process

CMS renders the whole catering process paperless by replacing the paper vouchers with RFID enabled cards with POS making the process less tedious.

Boosting operational performance

With CMS, organizations can boost operational performance by cutting on the throughput time of the catering process

Fully Scalable and Flexible solution

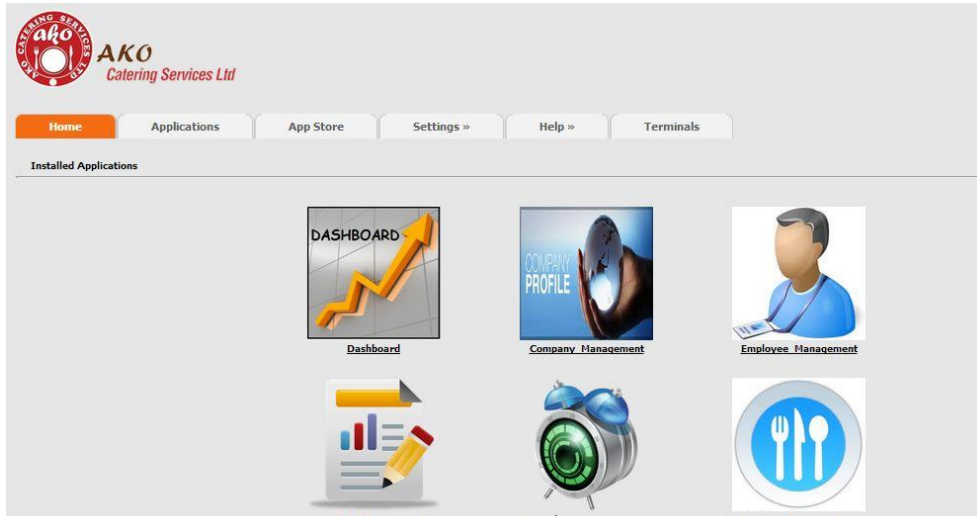

CMS has maximum scalability and flexibility to accommodate other organization features

Support prepaid, postpaid accounts and Cashless transactions

CMS can eliminate cash from the entire system replacing it with RFID enabled cards.

Customizable menu and menu schedule

CMS gives organizations the power to have full control on the menu and meal timing over the course of the day

Customizable managerial, financial and operational reports

CMS produces useful managerial, financial and operational reports which can assist in decision-making, planning, forecast, monitoring and evaluation of the process.

CMS can be deployed as a time attendance and Payroll enabled

Using the POS and the cards, CMS can be deployed as an employee management, payroll and time attendance tool.

Efficient Resource Management

CMS can assist the resource/ raw material planning for food monitoring and analysis to prevent wastage

Ability to export data to any existing Payroll/Billing Software

CMS allows exporting data to an existing Payroll/ Billing Software for further consolidation of data.
